Interview summary: exp_005

New participant. Role: Software Engineer (Research)

Fairness

Q: Does the implementation decision described in the statements involve an ethically relevant consideration?

Yes, in my opinion all of them make developers think about ethical aspects because they need to reason about the inclusion like gender, nationality and age

Q: Do the statements primarily reflect the intended ethical aspect, rather than the others?

Yes, the fact that most of the scenarios require a sort of choice between two possible alternatives guide the developer in thinking only about the ethical aspect driving the decision

Q: Do the alternative implementation choices in the scenarios differ meaningfully in the extent to which they reflect the ethical aspect?

Not completely, the first two include nationality while the last ones only age. Maybe making each scenario focusing only on one aspect? Like gender - nationality - age - economy situation

Q: Could a developer's response to this scenario provide evidence about their preference regarding the ethical aspect?

Yes, the developer answers will reflect if he/she is prone to include ethical aspects in the choice

Q: Additional comments (if any)

No further comments

Inclusiveness

Q: Does the implementation decision described in the statements involve an ethically relevant consideration?

Yes, except for the first one, maybe the accessibility aspect could be stressed more in the sense of who is being affected by only mouse modality

Q: Do the statements primarily reflect the intended ethical aspect, rather than the others?

Yes, same comment of the previous ethical aspect

Q: Do the alternative implementation choices in the scenarios differ meaningfully in the extent to which they reflect the ethical aspect?

Yes

Q: Could a developer's response to this scenario provide evidence about their preference regarding the ethical aspect?

Yes

Q: Additional comments (if any)

Maybe the scenario could be a bit more detailed so that the ethical aspects really affects something. For instance, if the "profile form" of I3 is for the minigolf membership of a 5k village, the developer may answer differently with respect to a scenario where the profile form is for the registration to a visa. The premise "which requires additional ..." may depend also on the "size" and relevance of the target systems. For a simple project, I personally would not include all of the inclusiveness aspects while for a bigger one I would.

Privacy

Q: Does the implementation decision described in the statements involve an ethically relevant consideration?

Partially

Q: Do the statements primarily reflect the intended ethical aspect, rather than the others?

Yes

Q: Do the alternative implementation choices in the scenarios differ meaningfully in the extent to which they reflect the ethical aspect?

Partially, P2 and P3 seems both related to location so maybe replacing one of them with a different one could be useful

Q: Could a developer's response to this scenario provide evidence about their preference regarding the ethical aspect?

Partially

Q: Additional comments (if any)

I answered partially to all the questions because I'm not sure if the ethical aspects are really related to privacy. For intsance, in P4, "individual usage events" do not make me feel a real privacy concern or usage of personal/sensitive information. I would suggest to make more explicit the usage of such kind of info.

Transparency and Explainability

Q: Does the implementation decision described in the statements involve an ethically relevant consideration?

Yes

Q: Do the statements primarily reflect the intended ethical aspect, rather than the others?

Yes

Q: Do the alternative implementation choices in the scenarios differ meaningfully in the extent to which they reflect the ethical aspect?

Yes

Q: Could a developer's response to this scenario provide evidence about their preference regarding the ethical aspect?

Yes

Q: Additional comments (if any)

No further comments

Traceability

Q: Do the statements primarily reflect the intended ethical aspect, rather than the others?

Yes

Q: Do the alternative implementation choices in the scenarios differ meaningfully in the extent to which they reflect the ethical aspect?

Yes

Q: Could a developer's response to this scenario provide evidence about their preference regarding the ethical aspect?

Yes

Q: Additional comments (if any)

For trasparency and traceability I don't have any particular concern

Resource Consumption

Q: Does the implementation decision described in the statements involve an ethically relevant consideration?

Partially

Q: Do the statements primarily reflect the intended ethical aspect, rather than the others?

Partially

Q: Do the alternative implementation choices in the scenarios differ meaningfully in the extent to which they reflect the ethical aspect?

Partially

Q: Could a developer's response to this scenario provide evidence about their preference regarding the ethical aspect?

Partially

Q: Additional comments (if any)

These seemed to me more about everyday code optimization aspects and I'm not sure if they are able to give evidence about ethical aspects. Maybe I can suggest to give harder options.

Final Questions

Q: Do you think that the proposed five-point response scale is appropriate for expressing the developer's preference regarding the described implementation choice?

Yes

Q: Do you think that averaging the statements scores is an appropriate aggregation strategy?

Yes, if they contribute equally

Q: Should all statements contribute equally to the aspect score?

Yes, if they are kept at the same level of complexity

Authors' summary

- Scenarios can be more detailed concerning the context, since it is relevant to the decision
  Authors' response: since the questionnaire should be general and applicable across contexts, while the profile is context-dependent, we leave the application context to be decided by the questionnaire respondents, asking them to keep it consistent across the statements.
