Interview summary: exp_001

New participant. Role: Philosopher, with expertise in Trustworthy AI (Research)

Fairness

Q: Does the implementation decision described in the statements involve an ethically relevant consideration?

Yes, all of them.

Q: Do the statements primarily reflect the intended ethical aspect, rather than the others?

Yes

Q: Do the alternative implementation choices in the scenarios differ meaningfully in the extent to which they reflect the ethical aspect?

Yes

Q: Could a developer's response to this scenario provide evidence about their preference regarding the ethical aspect?

Yes, even though in some cases they should not be even allowed to choose. Some of them should be about "hard ethics" rather than "soft ethics" - i.e. should be respected regardless of the developer preferences.

Q: Additional comments (if any)

No further comments

Inclusiveness

Q: Does the implementation decision described in the statements involve an ethically relevant consideration?

Yes (except for the first one: I am not sure about its ethical aspect, but it can be because I am not an expert in SE).

Q: Do the statements primarily reflect the intended ethical aspect, rather than the others?

Yes, but as I said for the previous question, I am not sure of the first one.

Q: Do the alternative implementation choices in the scenarios differ meaningfully in the extent to which they reflect the ethical aspect?

Yes

Q: Could a developer's response to this scenario provide evidence about their preference regarding the ethical aspect?

Yes

Q: Additional comments (if any)

I Still believe that some of these should not be considered as soft ethical scenarios.

Privacy

Q: Does the implementation decision described in the statements involve an ethically relevant consideration?

Yes

Q: Do the statements primarily reflect the intended ethical aspect, rather than the others?

Yes

Q: Do the alternative implementation choices in the scenarios differ meaningfully in the extent to which they reflect the ethical aspect?

P1 and P2 seem to be quite similar to me. Yes the other two.

Q: Could a developer's response to this scenario provide evidence about their preference regarding the ethical aspect?

Yes

Q: Additional comments (if any)

No further comments.

Transparency and Explainability

Q: Does the implementation decision described in the statements involve an ethically relevant consideration?

Yes

Q: Do the statements primarily reflect the intended ethical aspect, rather than the others?

Yes

Q: Do the alternative implementation choices in the scenarios differ meaningfully in the extent to which they reflect the ethical aspect?

Yes

Q: Could a developer's response to this scenario provide evidence about their preference regarding the ethical aspect?

Yes

Q: Additional comments (if any)

Same as before: for some of these cases the developer should not be allowed to express their preferences

Traceability

Q: Do the statements primarily reflect the intended ethical aspect, rather than the others?

Not sure TR1 and TR2 are a lot about ethics. TR3 and TR4 work better as ethical scenarios (even if not as for all the other cases).

Q: Do the alternative implementation choices in the scenarios differ meaningfully in the extent to which they reflect the ethical aspect?

Yes, but my doubt affects also this answer.

Q: Could a developer's response to this scenario provide evidence about their preference regarding the ethical aspect?

Yes, but not sure how much they're about ethics.

Q: Additional comments (if any)

No further comments.

Resource Consumption

Q: Does the implementation decision described in the statements involve an ethically relevant consideration?

Yes

Q: Do the statements primarily reflect the intended ethical aspect, rather than the others?

Yes

Q: Do the alternative implementation choices in the scenarios differ meaningfully in the extent to which they reflect the ethical aspect?

Yes

Q: Could a developer's response to this scenario provide evidence about their preference regarding the ethical aspect?

Yes

Q: Additional comments (if any)

Here my confidence is quite low - I am not an expert and I am not sure I understand the scenarios as I should to answer the questions.

Final Questions

Q: Do you think that the proposed five-point response scale is appropriate for expressing the developer's preference regarding the described implementation choice?

Yes - but I would leave room for them to justify their answers.

Q: Do you think that averaging the statements scores is an appropriate aggregation strategy?

Yes

Q: Should all statements contribute equally to the aspect score?

Yes, even if, as I said before, there are cases where it is not a matter of personal preferences and the developers should not be allowed to express them (or at least they should not be taken into account).

Authors' summary

- Some of the scenarios do not represent soft-ethical aspects, but hard ethics and they should not be left to the developer's discretion.
