Interview Summary: dev_002

- 3-5 years of experience
- Private company
- Current role: DevOps / Platform Engineer
- Domain of developed software: Public Administration / Government
- Back-end development; DevOps / Infrastructure / Cloud
- 11-50 developers per team

Structured Questions:

Q: Are the scenario and the implementation choices clearly described?

Yes

Q: Do the scenarios represent a plausible decision scenario?

Yes

Q: Could the scenarios arise across different development contexts?

Yes

Q: Can the implementation choices in the scenarios be driven by the personal preferences of the developer on fairness, privacy, inclusiveness, transparency & explainability, traceability, and resource consumption?

Yes

Q: Did you feel inclined to provide socially acceptable responses rather than express your genuine preferences?

No

Follow-up discussion:

Author: Did you perceive that scenarios have ethical implications? If so, did you answer only according to those implications or did you consider possible differences in the development effort?

dev_002: I noticed ethical implications in the scenarios, and I considered those when answering. Sometimes I found the ethical implication irrelevant for me, so I did not consider

them. In any case, I did not consider the development effort, as I followed the questionnaire instructions

Author: Do you think that there are scenarios that are more relevant than others in the ethical implications?

dev_002: No, or, if it should be, I did not notice.
